

Empower BI with Dremio

Set your data free

Deliver Lightning-Fast, Self-Service Analytics

The Power of
Dremio

The Power of Dremio

Dremio is a next generation Data Lake solution that enables the user to assimilate data from various sources and generate useful insights on it.

The sources supported are :

- MySQL
- MongoDB
- Oracle
- PostgreSQL
- Amazon S3 Datastore

And many more

Benefits of the Tool

MODULARITY

We can separate our compute and storage units (run queries on remotely located data) which boost robustness and fault-tolerance in data.

AVOID VENDOR LOCK-IN

It allows us to avoid vendor lock-in (access datasets from variety of sources) and thus keeps our storage infrastructure flexible.

SCALABILITY

Kubernetes architecture gives us a great measure of scalability to handle all kinds of workloads.

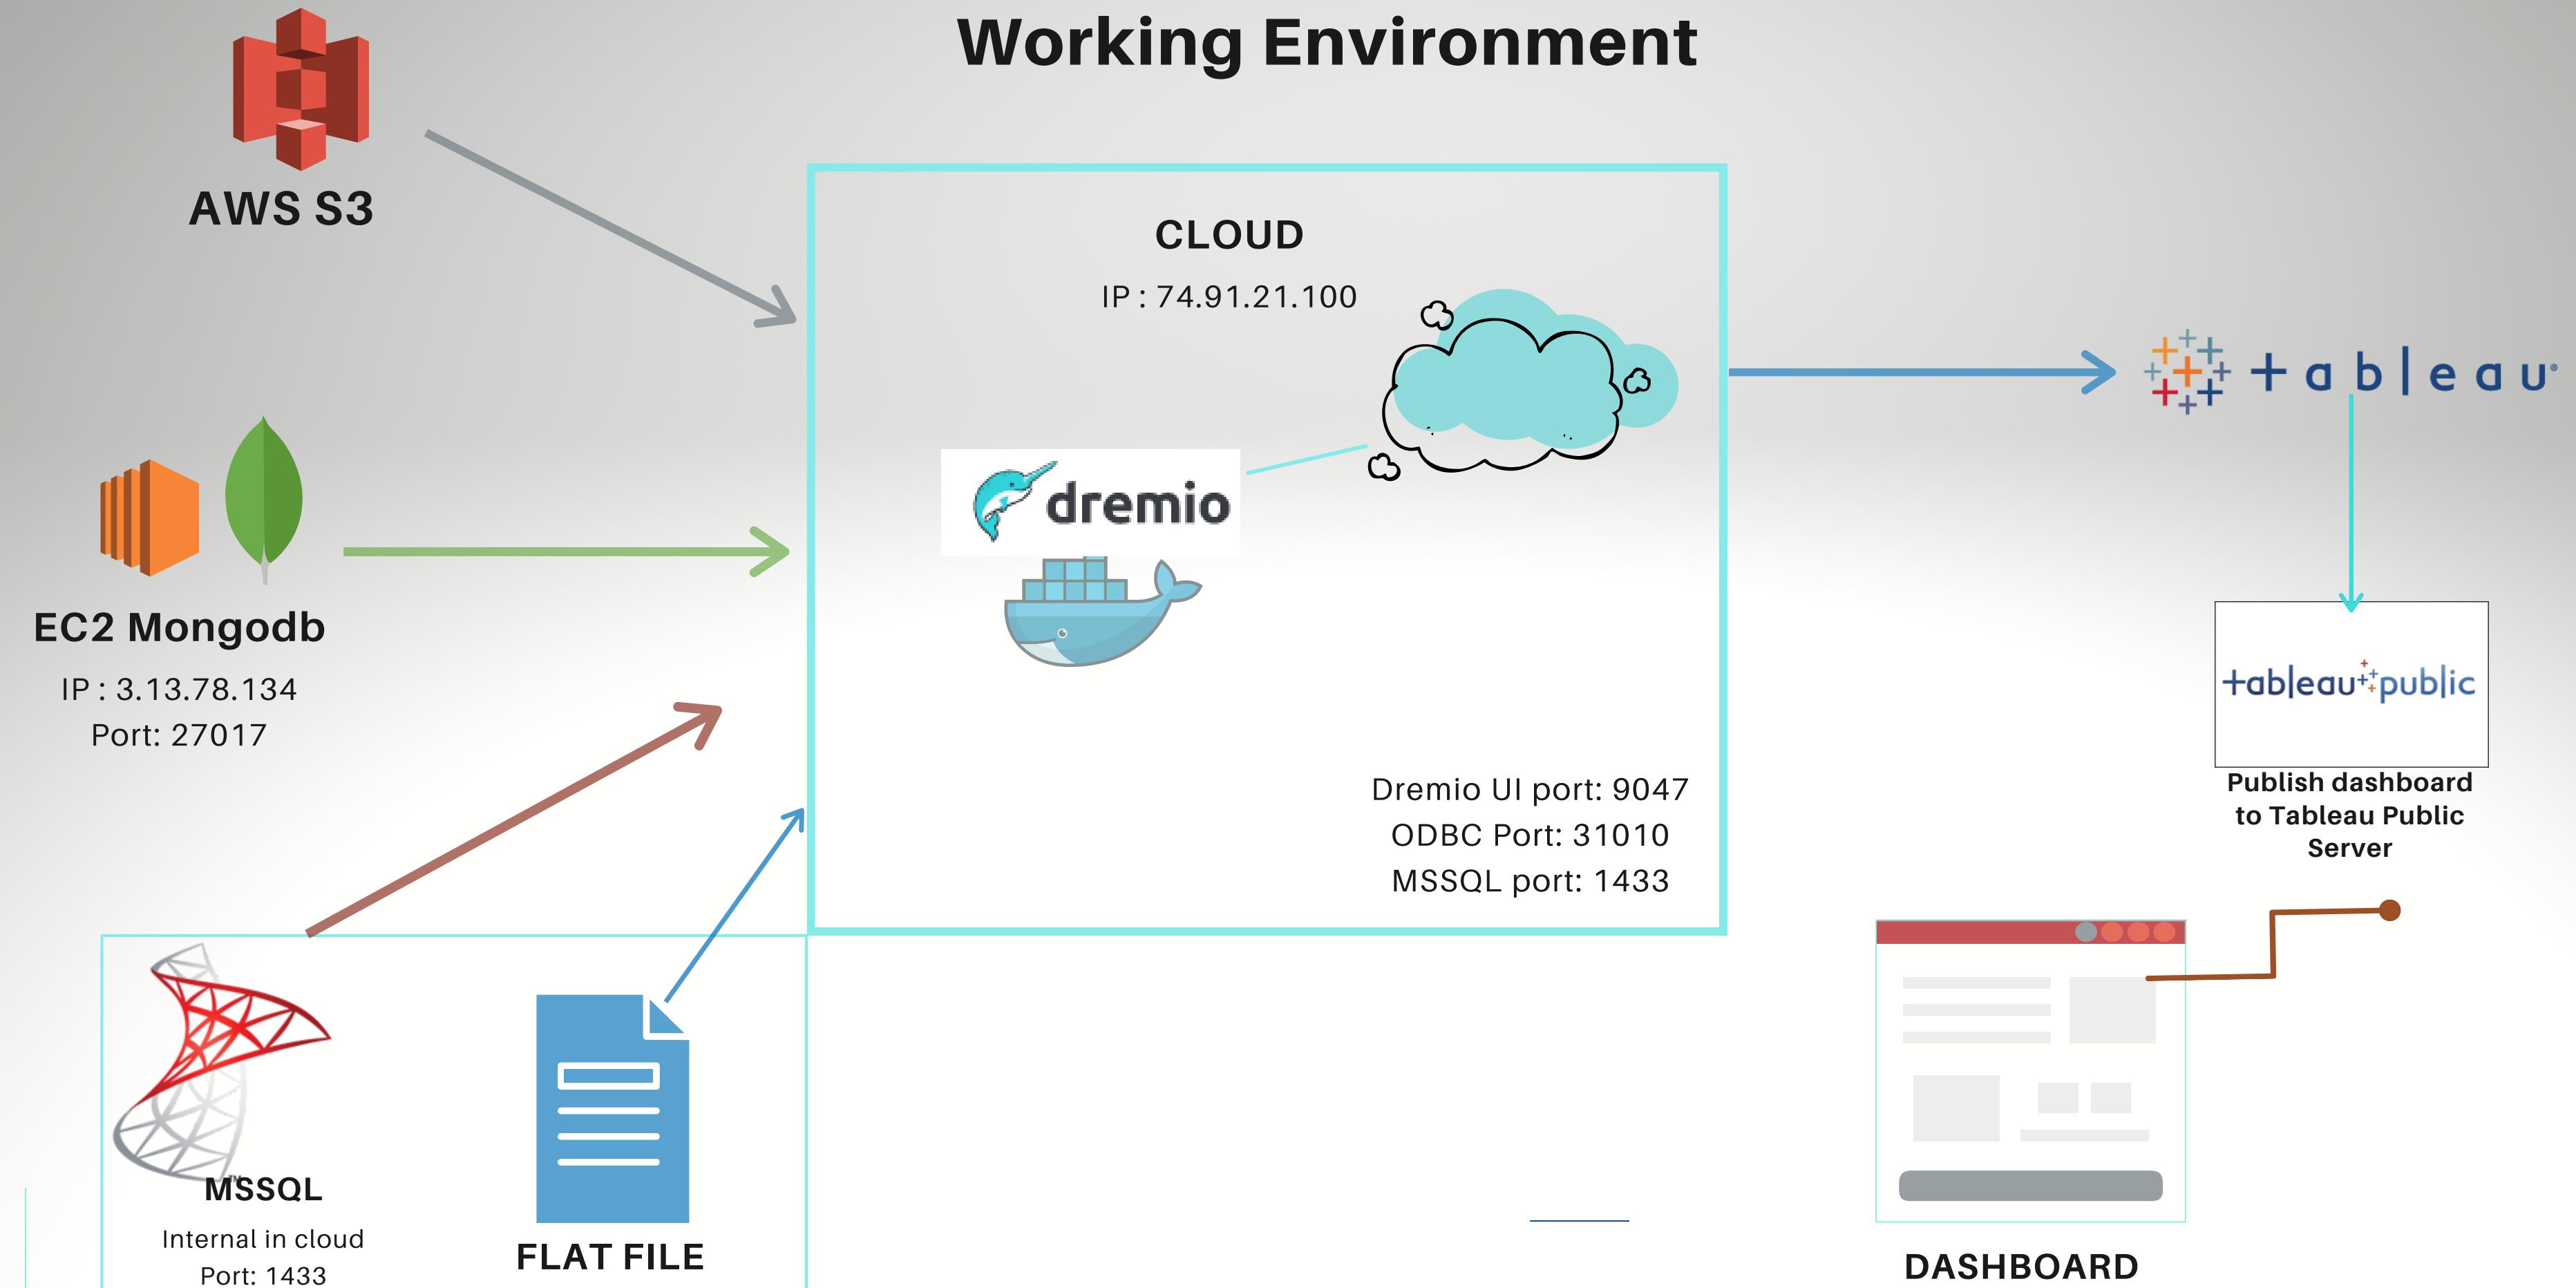

SPEED

Accelerate BI dashboarding and reporting queries by another 10-100x with Data Reflections in Dremio. Reflections are physically optimized parquet data structures.

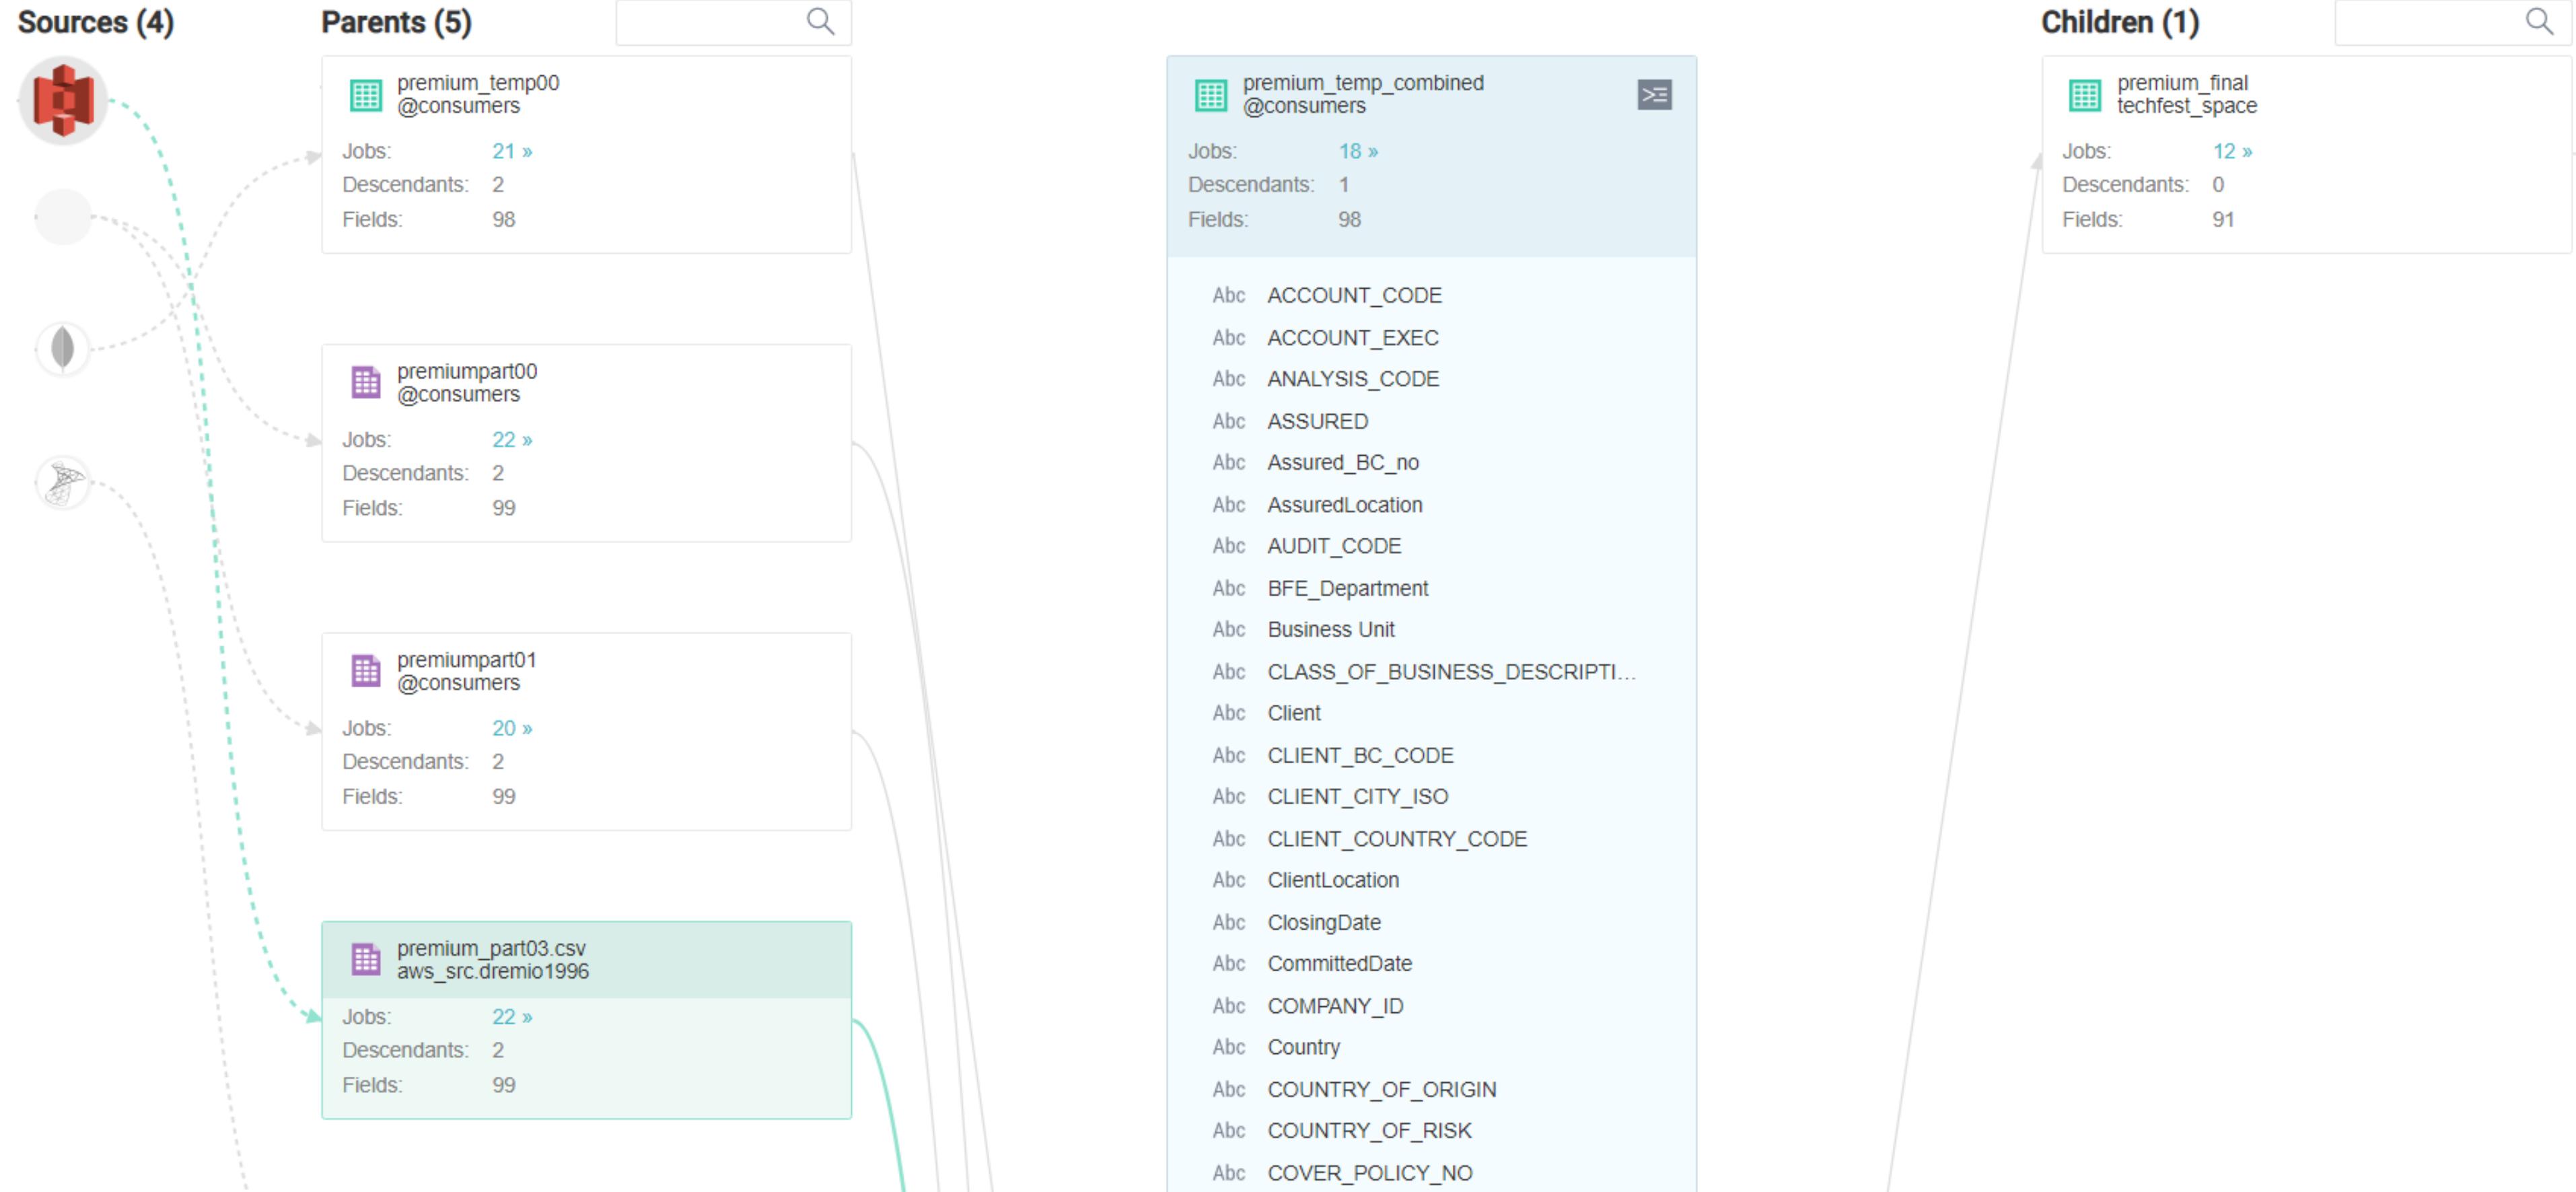

VISUALIZATION

Easily connect to various visualization software such as Tableau, Jupyter Notebooks etc. which enable us to generate useful insights on the underlying data.

Working Environment
